-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Double Patenting

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-20 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-42 of U.S. Patent No. 6,659,831. Although the conflicting claims are not identical, they are not patentably distinct from each other because it would have been obvious to delete elements from the patented case but not recited in the instant application for the purpose of making a simpler device.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-4, 8,9 13, 14-15, 17,20 are rejected under 35 U.S.C. 102(b) as being anticipated by '346 to Sheng. Sheng discloses a bubble generating assembly comprising a housing (2), a dipping chamber associated with the housing (4), a source of bubble solution (5), a tube coupling the source of bubble solution with the dipping chamber (17), the tube having one end positioned inside the dipping chamber (fig 2), means for retaining the end of the tube in a fixed position inside the dipping chamber (see figure 2 the portion of the lower mouth 4 that retains the tube 17), where the source of bubble solution is a bottle (5), further including means for coupling the bottle to the dipping chamber (threads in container, see figure 2), wherein the dipping chamber is defined by a bottom plate and enclosing wall provided with an opening in the bottom plate (see figure 2, bottom plate of the lower mouth, side walls of the mouth and the opening in the bottom plate where the tube is inserted), further including a connector adjacent the bottom plate for releasably connecting the bottle to the dipping chamber (threads, see figure 2), where the bubble producing device is positioned directly above the bottle (fig 2), further including an air generator (portion of 7 located inside the housing) positioned inside the housing and the housing further including an opening and aligned with the air generator (16), applying pressure to the bottle to deliver the bubble into the dipping chamber (fig 1 and column 2, lines 34-37 of the specification).

Conclusion

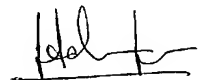

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. This is simply art of interest and was not used to reject any claims in this office action.
